ADDITIONAL SUPPORTING REMARKS REGARDING THIS PROOF'S FILING

Multiple springs and seeps are located in the place of use. The description of the three main spring sources as significant diversion points are provided above. Water is commingled and supplemental with with other sources on the place of use, including waters from Rock Canyon.

Spring flow has been declining since the onset of heavy development of groundwater rights in the basin. The entire flow of the appurtenant springs is diverted and used to irrigated lands and water livestock when available.

The diversified pasture areas include Top Fescue, Timothy, and Johnson Grasses.

This vested claim limits that historic use shown on the record of survey to the owned lands by the applicant and adjacent fenced improvements. The full water right has been used since pre 1879 to water livestock and provide hay and forage. Irrigation and livestock uses have continued to the extent water has been available at the source.

STATE ENGINEER'S OFFICE See supporting documentations supplied with this filing for additional information and historic uses. The undersigned, being first duly sworn, deposes and says that the facts relative to the appropriation of water by are full and correct to the best of their knowledge and belief. Milton Thompson (Name) Agent If proof is not made by the claimant, deponent shall state on this line by virtue of what authority they represent the claimant Name George M.
