ABSTRACT

This inventory represents the status and pumpage of all permitted, certificated, claims of vested right groundwater rights, and exempt domestic wells located within Pahrump Valley, Hydrographic Basin 10-162, for calendar year 2024 (January 1, 2024, through December 31, 2024). Also included are tables, graphs, and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a continual basis.

For calendar year 2024, the committed groundwater resource totaled 75,055 acre-feet, with an estimated pumpage of approximately **15,138 acre-feet**. This figure includes an estimated 5,975 acre-feet pumped from domestic wells.

Pumpage by domestic wells was the largest manner of use within the basin. The second largest manner of use was municipal, with commitments totaling 31,273 acre-feet and pumpage of 3,260 acre-feet. The third largest manner of use was irrigation, with commitments totaling 9,418 acre-feet and pumpage of 2,990 acre-feet.

HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	162, REGION 10
HYDROGRAPHIC BASIN NAME	PAHRUMP VALLEY
COUNTIES	CLARK, NYE
MAJOR COMMUNITIES	PAHRUMP
DESIGNATED	YES
DENIALS BASED UPON WATER AVAILABILITY	ALL USE – SEE ORDER 1252
GROUNDWATER LEVEL MEASUREMENTS	NDWR, USGS, NYE COUNTY
PUMPAGE INVENTORY, ACRE-FEET IN 2024	15,138[1]

STATE ENGINEER'S ORDERS

NO. 176 – DESIGNATION (PORTION)	DATE: MARCH 11, 1941
NO. 193 – EXTENSION OF DESIGNATED AREA	DATE: JANUARY 15, 1948
NO. 205 – EXTENSION OF DESIGNATED AREA	DATE: JANUARY 23, 1953
NO. 206 – MEASURING DEVICES	DATE: MAY 4, 1953
NO. 381 – NOTICE OF CURTAILMENT & PREFERRED USE	DATE: JUNE 1, 1970
NO. 955 – AMENDMENT OF ORDER 381	DATE: OCTOBER 26, 1987

STOCKWATERING..... 5		

[1] Includes pumpage by exempt domestic wells, as defined by NRS 534.013, and reported pumpage from Great Basin Water Company.

[2] Committed groundwater resource data are accurate as of the date listed. Manner of use category totals vary over time, as rights are not static. Rights may be subject to change applications, certification, withdrawals, forfeiture, and cancellations; each of these circumstances could affect the duty, diversion rate, and acreage associated with a given right. The value associated with each manner of use category does not include the amount relinquished in support of domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic and is based on the number of domestic wells (exempt and permitted) in the NDWR Well Log Database.

[3] Due to rounding, numbers presented in tables within this report may not add up precisely to the totals provided.

PURPOSE AND SCOPE

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped within the Nevada portion of Pahrump Valley during calendar year 2024. This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, claims of vested right, as well as the amount pumped by exempt domestic wells within the basin.

DESCRIPTION OF THE STUDY AREA

Pahrump Valley is a basin located in southern Nevada that straddles the Nevada and California state line. The valley is approximately 45 miles west of Las Vegas and is within the Central Hydrographic Region. The Town of Pahrump is the principal community. The Nevada portion of the basin (approximately 789 square miles) lies within Clark and Nye Counties, and the California portion of the basin (approximately 145 square miles) lies within Inyo County (Figure 1).

Pahrump Valley is bounded on the east and northeast by the Spring Mountains, the basin's primary watershed. The basin is bounded by the Resting Spring and Nopah Ranges on the west and northwest and by the Kingston Range on the south. The southern and southeast boundaries are formed by a low alluvial rise and intermittent hills separating Pahrump Valley from Mesquite (Sandy) Valley. The adjacent Nevada hydrographic basins are Amargosa Valley (14-230) to the northwest, Indian Springs Valley (10-161) to the northeast, Las Vegas Valley (13-212) to the east, and Mesquite (Sandy) Valley (10-163) to the southeast. The designated areas of the Pahrump Valley Hydrographic Basin are described by Orders 176, 193, and 205 issued by the Nevada State Engineer on March 11, 1941, January 15, 1948, and January 23, 1953, respectively.

The U.S. Geological Survey (USGS) maintains one stream gauging station in the basin (site #10251980), on Lovell Wash near the southeastern boundary of the basin.

GROUNDWATER LEVELS

Depths to groundwater are measured in various groundwater basins in Nevada (Figure 2). Groundwater level data for the Pahrump Valley, collected and reported to NDWR can be found at: http://tools.water.nv.gov/WaterLevelData.aspx. NDWR also maintains a mapping application for these ground water level data: https://tinyurl.com/WLDashboard. Additional groundwater level data collected by the U.S. Geological Survey (USGS) at various locations across the state may be accessed through their website at: https://waterdata.usgs.gov/.

METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits, and certificates issued by the State Engineer, as well as the amount pumped by exempt domestic wells in the valley. Table 1 and Figure 3 show historical pumpage by manner of use; Figure 4 shows the amount and percentage of water pumped by manner of use; and Figure 5 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use as well as the amount pumped by exempt domestic wells within the basin.

- Where totalizing meters were in place, meter readings were taken by NDWR staff or reported by the permittee. Readings are compared with previous data, if available; reported pumpage totals may be verified by staff.
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights were supplemental to surface water, groundwater use was estimated using the NIWR method above but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: http://tools.water.nv.gov/Evapotranspiration.aspx.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty, if the use was as described in the certificate, permit, or claim. If the use was not as described in the certificate, permit, or claim, a value was estimated based upon the circumstances of use for the subject year.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) 534.180. NRS 534.013 defines this category of domestic use as follows: *"Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets."* The number of domestic wells (exempt and permitted) in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped annually by domestic wells is estimated to be 0.5 acre-foot per well in Pahrump Valley.

TABLES

Table 1. Pahrump Valley historical pumpage (acre-feet) by reporting year.
